

# WholeTEAM Use Case Model (UCM)

---

**WholeTEAM Use Case Model (UCM)** comprises the following two listings:

1. System Use Cases Listing
2. System Use Case Requirements Listing

## 1. System Use Cases Listing

The System Use Cases Listing lists all the system use cases supported by the Product. For each use case it maintains the following required information:

Field #	Field Name	Field Description
1	Use Case ID	Unique identifier of use case
2	Use Case Name	Name of use case
3	Short Description	Short description of use case
4	Product ID	Product to which use case corresponds
5	Effective Start Version	Product version in which use case first became effective
6	Effective End Version	Product version in which use case first became no longer effective ('Null' if use case is currently effective)
7	Comments	Any comments ('Null' if no comments)

## 2. System Use Case Requirements Listing

The System Use Case Requirements Listing lists all the use case requirements corresponding to the Product's each system use case. For each use case requirement it maintains the following required information:

Field #	Field Name	Field Description
1	Requirement ID (SRIN)	Unique, fixed and traceable identifier of requirement (See <a href="#">WholeTEAM Systems Requirement Identification Numbering (SRIN) Scheme.</a> )
2	Requirement	Use case requirement
3	Use Case ID	Use case to which requirement corresponds
4	Product ID	Product to which requirement corresponds
5	Effective Start Version	Product version in which requirement first became effective
6	Effective End Version	Product version in which requirement first became no longer effective ('Null' if requirement is currently effective)
7	Comments	Any comments ('Null' if no comments)
